

Billing client Installation

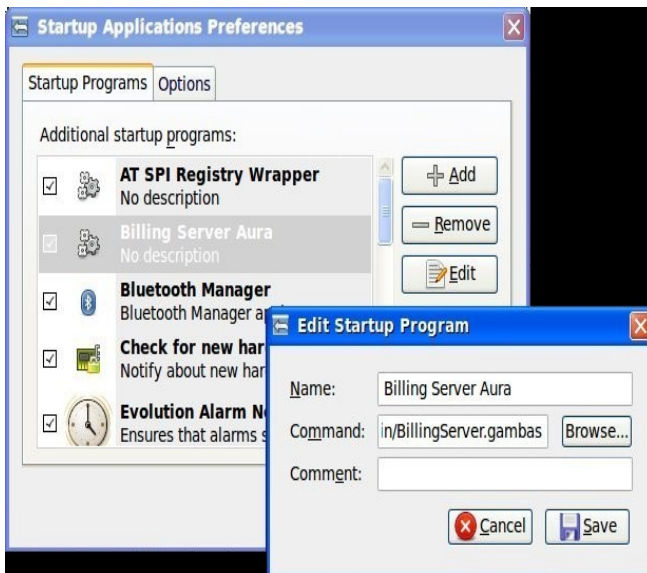

Installing Client Billing

Then run .deb file for the client and follow the installation instructions to complete, if you experience installation errors because there are supporting files that have not been installed, the following is a list of files needed during installation:

gambas2-runtime
gambas2-gb-qt
gambas2-gb-form
gambas2-gb-db
gambas2-gb-net
gambas2-gb-net-smtp
gambas2-gb-qt-ext

or type on terminal :

```
sudo apt-get install gambas2-runtime gambas2-gb-qt gambas2-gb-form gambas2-gb-db  
gambas2-gb-net gambas2-gb-net-smtp gambas2-gb-qt-ext
```

Picture A

Settings for the billing path at startup with the following ways:

Go to the menu in Ubuntu: System > Preferences > Startup Applications, which will appear next menu, click Add then fill the column

Name: Billing Client Aura

Command: /usr/bin/BillingClient.gambas

Then press Save to save. And billing server can run automatically when the computer starts.

At the time of billing the first time you run the client will request to set the IP server to communicate with the billing server is like the picture beside. In Server IP field enter the IP address of the billing server, if you want to change the background image you can input the following folder name the image file name where the image is placed. Then if you do not change the billing server then port to port kolok not need to be adjusted again.

Furthermore, if you want to save the changes press the "Save". Then billing will be closed, you can run it again if billing client setting above is true then the display will appear as below:

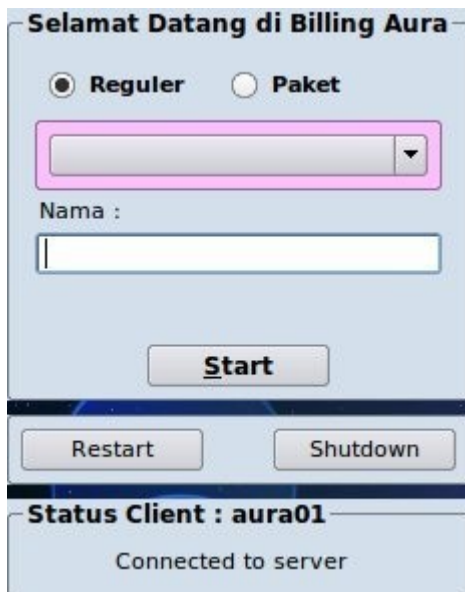

Figure in addition showed that between billing clients by the billing server has been connected properly. Take a look at the status of the client.

If the client wants to hire seorang internet can select the option beside (Regular / Packs).

- If you choose Regular regular clicks and then fill in name and press "start"
- If you select Package click package and select the combo box which packages will be selected and then fill in the name of the column name and press "start"

If you want to get into the admin menu as shown in **picture A** you can click 2 times on paper Status of Client and the surrounding If successful login dialog box will appear next. If the user wants to send a message to be conveyed through the billing operator by pressing the "Send Message". While the "STOP" to end billing functions.

Note: When you first install the client
 username: admin and password
 default: aura999

if the password on the server has changed the password to follow the client server
