

Billing Server Installation

Before you install the server should first install the sqlite package:

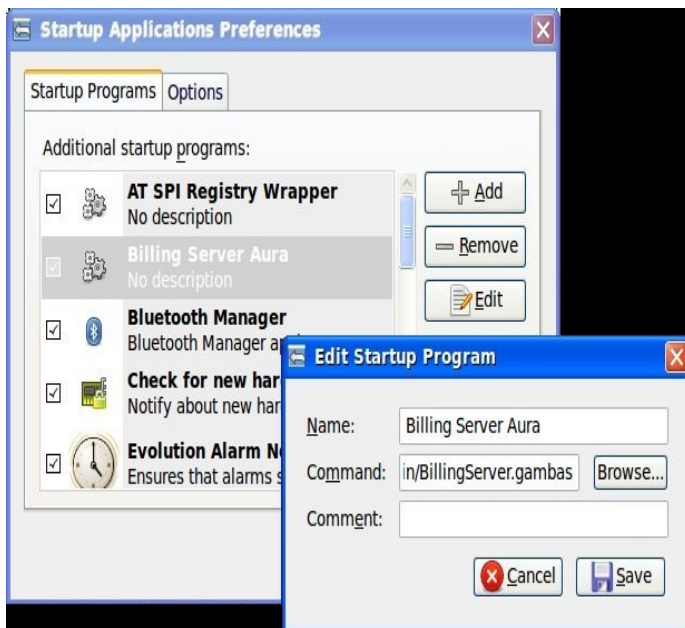

```
$ sudo apt-get install sqlite
```

Run the .deb file to the server and follow the installation instructions to complete, if you experience installation errors because there are supporting files that have not been installed, the following is a list of files needed during installation:

```
libc6  
libreadline5  
libsqlite3-0  
sqlite3-doc  
gambas2-runtime  
gambas2-gb-qt  
gambas2-gb-form  
gambas2-gb-db  
gambas2-gb-net  
gambas2-gb-net-smtp  
gambas2-gb-qt-ext  
gambas2-gb-db-sqlite
```

or type on terminal :

```
sudo apt-get install sqlite libc6 libreadline5 libsqlite3-0 sqlite3-doc gambas2-runtime gambas2-gb-qt gambas2-gb-form gambas2-gb-db gambas2-gb-net gambas2-gb-net-smtp gambas2-gb-qt-ext gambas2-gb-db-sqlite
```

Settings for the billing path at startup with the following ways:

Go to the menu in Ubuntu: System > Preferences > Startup Applications, which will appear next menu, click Add then fill the column Name: Billing Server Aura Command: / usr / bin / BillingServer.gambas Then press Save to save. And billing server can run automatically when the computer starts.
